design how the app will look.

~~MIT App Inventor~~

Instead, App Inventor supports a SQL-like database called

“ Fusion Tables ” and they have launched a

new feature in

“ experimental ” mode, called Firebase

DB. Fusion tables are somewhat complex to

# Download File

## PDF App

set up (you have to login in to a Google developer ' s console to create your Fusion table, set up various linkages) and then write special App Inventor code to link to the Fusion table.

## And Files

~~Creating a Custom~~

~~TinyWebDB Service~~

~~(App Inventor 2)~~

~~TinyWebDB is an App~~

~~Inventor component~~

~~that allows you to store~~

~~data persistently in a~~

~~database on the web.~~

~~Because the data is~~

# Download File PDF App

stored on the web instead of a particular phone, TinyWebDB can be used to facilitate communication between phones and apps (e.g., multi-player games).

## ~~Custom TinyWebDB (App Inventor 2)~~

You can set it to any App Inventor compliant web service, that is, any site that has been setup

# Download File PDF App

especially for use with App Inventor and TinyWebDB. By default, TinyWebDB stores data at [appinventor.webdb.appspot.com](http://appinventor.webdb.appspot.com). Be careful, though, as this web database is shared amongst all App Inventor programmers.

~~Web Databases~~

Appinventor

A database is a place

# Download File PDF App

where information or data can be stored until it is removed or replaced. Facebook uses a database to store usernames and corresponding passwords. Android devices have internal databases that store information about you or your phone. App Inventor allows us to access this database

# Download File PDF App

through the use of  
TinyDB.

## App Inventor 2 Concepts

This app is a simple app that uses the CloudDB component to store data in the cloud, and allows multiple users of the app to communicate over multiple devices. Go to [ai2.appinventor.mit.edu](http://ai2.appinventor.mit.edu) and start a new project.
