LATEX (pronounced lay-tek) is a document preparation system for producing professional-looking documents, it is not a word processor. It is particularly suited to producing long, structured documents, and is very good at type-setting equations. It is available as free software for most operating systems.

Latex interactive guide Within the last year someone posted on a thread, it wasn't the main thread subject I think, a very useful seeming table of Latex which I think was interactive or semi-interactive. I thought note that and didn't and now can't find it. It would be useful to me right now, and think it

would be useful to many others.

Few books guide you through the process of "designing" a

LaTeX document, making small steps from a simple text to a complete report, and this is a nice example. It is very well-written, and it is very easy to follow. With its exercises, it is just like a class about LaTeX.
