Longitude (/ˈlɒnɡɪtʊːdʒ/, AU and UK also /ˈloŋɡɪ./), is a geographic coordinate that specifies the east–west position of a point on the Earth's surface, or the surface of a celestial body. It is an angular measurement, usually expressed in degrees and denoted by the Greek letter lambda (λ). Meridians (lines running from pole to pole) connect points with the same ...

Longitude—Wikipedia

The longitude has the symbol of lambda and is another angular coordinate defining the position of a point on a surface of earth. The longitude is defined as an angle pointing west or east from the Greenwich Meridian, which is taken as the Prime Meridian. The longitude can be defined maximum as 180° east from the Prime Meridian and 180° west ...

Definition of longitude 1 a : angular distance measured on a great circle of reference from the intersection of the adopted zero meridian with this reference circle to the similar intersection of the meridian passing through the object

Longitude | Definition of Longitude by Merriam-Webster

Distance east or west on the Earth's surface, measured in degrees from a certain meridian, usually the prime meridian at Greenwich, England, which has a longitude of 0°. The distance of a degree of longitude is about 69 statute miles (111 kilometers) or 60 nautical miles at the equator, narrowing to zero at the poles.

Longitude—definition of longitude by The Free Dictionary

The meridian opposite the Prime Meridian (on the other side of the Earth) is the 180° longitude and is known as the antimeridian. Modern timekeeping systems use longitudes as references to keep time. Time zones are defined by the Prime Meridian and the longitudes. An Easy Way to Remember .

What Is Longitude and Latitude?

Longitude is a measurement of location east or west of the prime meridian at Greenwich, the specially designated imaginary north-south line that passes through both geographic poles and Greenwich, London.

latitude and longitude | Definition, Examples, Diagrams—

To measure longitude east or west of the Prime Meridian, there are 180 vertical longitude lines east of the Prime Meridian and 180 vertical longitude lines west of the Prime Meridian, so longitude locations are given as __ degrees east or __ degrees west.

Understanding Latitude and Longitude—Journey North

If you divide the circumference of the earth (approximately 25,000 miles) by 360 degrees, the distance on the earth's surface for each one degree of latitude or longitude is just over 69 miles, or 111 km. Note: As you move north or south of the equator, the distance between the lines of longitude gets shorter until they actually meet at the poles.
