O2 Xda Atom review: O2 Xda Atom - CNET

O 2 Xda Atom Windows Mobile phone (Pocket PC Phone) is a tiny smartphone with advanced PDA functionalities, and runs on Windows Mobile 5.0 and features 2.0-megapixel digital camera, built-in WiFi, built-in FM radio and other features of O2 Xda Mini, and most importantly share the sleek and light design of O2 Xda II Mini.

O2 Xda Atom Reviews - Tech Journey

The O2 Xda brand was a range of Windows Mobile PDA phones, marketed by O2, developed by O2 Asia and manufactured by multiple OEMs. The first model was released in June 2002. The last models came to market in 2008. The "X" represents convergence of voice and information/data within one product; the "DA" stands for "Digital Assistant", as in PDA.

O2 Xda - Wikipedia

O2's XDA Atom Exec is an incremental upgrade to the original Atom, a move the company hopes will help stave off increasing competition from the likes of HP with its iPAQ rw6828 or the upcoming ...

O2 Xda Atom Exec review: O2 Xda Atom Exec - CNET

Everything in the world is made up of tiny particles called atoms. There are more than 100 different kinds of atoms, and each kind has its own properties. Atoms of a given element have the same structure. An element is a pure substance that cannot be broken down into a simpler substance and is made of only one type of atom.

This volume contains the proceedings of the Second International Workshop on Mobile Entity Localization and Tracking in GPS-less Environments (MELT 2009), held in Orlando, Florida on September 30, 2009 in conjunction with the 11th International Conference on Ubiquitous Computing (UbiComp 2009). MELT provides a forum for the presentation of state-of-the-art technologies in mobile localization and tracking and novel applications of location-based services. MELT 2009 continued the success of the first workshop in the series (MELT 2008), which was held in San Francisco, California on September 19, 2008 in conjunction with Mobicom. Location-awareness is a key component for achieving context-awareness. Recent years have witnessed an increasing trend towards location-based services and applications. In most cases, however, location information is limited by the accessibility to GPS, which is unavailable for indoor or underground facilities and unreliable in urban environments. Much research has been done, in both the sensor network community and the ubiquitous computing community, to provide techniques for localization and tracking in GPS-less environments. Novel applications based on ad-hoc localization and real-time tracking of mobile entities are growing as a result of these technologies. MELT brings together leaders from both the academic and industrial research communities to discuss challenging and open problems, to evaluate pros and cons of various approaches, to bridge the gap between theory and applications, and to envision new research opportunities.
