In a 2009 study
of the debt
collection

industry, the
Commission
concluded that
the “most
significant
change in the
debt collection
business in
recent years has
been the advent
and growth of
debt buying.”
“Debt buying”
refers to the

sale of debt by
creditors or
other debt
owners to buyers
that then
attempt to
collect the debt
or sell it to
other buyers.
Debt buying can
reduce the
losses that
creditors incur
in providing

credit, thereby
allowing
creditors to
provide more
credit at lower
prices. Debt
buying, however,
also may raise
significant
consumer
protection
concerns. The FTC
receives more
consumer

complaints about
debt collectors,
including debt
buyers, than
about any other
single industry.
Many of these
complaints
appear to have
their origins in
the quantity and
quality of
information that
collectors have

Read Book Ocr Past Papers D1

about debts. In its 2009 study, the Commission expressed concern that debt collectors, including debt buyers, may have insufficient or inaccurate information when they collect on debts, which may result in

collectors
seeking to
recover from the
wrong consumer
or recover the
wrong amount. The
FTC initiated
this debt buyer
study in late
2009 for two
main purposes.
First, the FTC
sought to obtain
a better

understanding of the debt buying market and the process of buying and selling debt. Second, the Commission wanted to explore the nature and extent of the relationship, if any, between the

practice of debt
buying and the
types of
information
problems that
the FTC has
found can occur
when debt
collectors seek
to recover and
verify
debts. Many
stakeholders
recognize the

concerns that
have been raised
about debt

buying,
including
consumer groups,
members of
Congress,
federal and
state regulatory
and enforcement
agencies, and
the debt buyer
industry itself.

Read Book Ocr Past Papers D1

Indeed, the debt buyer industry has launched a self-regulatory effort to address some of these concerns, and the FTC is encouraged by that effort.

This study of debt buyers is the first large-scale empirical

assessment of
the debt buying
sector of the
collection
industry. The
FTC hopes that
its findings
contribute to a
greater
understanding of
debt buying,
enhance ongoing
reform efforts,
and prompt

further study of
the industry. To
conduct its
study, the
Commission
obtained
information
about debts and
debt buying
practices from
nine of the
largest debt
buyers that
collectively

bought 76.1% of
the debt sold in
2008, with six
of these debt
buyers providing
the information
the Commission
used in most of
its analysis.
The FTC also
considered its
prior
enforcement and
policy work

related to debt collection, as well as available research concerning debt buying. The study focused on large debt buyers because they account for most of the debt purchased; it did not address

the practices of smaller debt buyers that are a frequent source of consumer protection concerns, a limitation that must be considered in evaluating the study's findings. The

acquired and
analyzed an
unprecedented
amount of data
from the studied
debt buyers,
which submitted
data on more
than 5,000
portfolios,
containing
nearly 90
million consumer

accounts,
purchased during
the three-year
study period.

These accounts
had a face value
of \$143 billion,
and the debt
buyers spent
nearly \$6.5
billion to
acquire them.

Most portfolios
for which debt
