Reproductive tract infections (RTIs) have become a silent epidemic that is devastating women's lives. Each year, thousands of women die needlessly from the consequences of these infections, including cervical cancer, ectopic pregnancy, acute and chronic infections of the uterus and the fallopian tubes, and puerperal infections. For many women, this happens because they receive medical attention too late, if at all. The terrible irony of this tragedy is that early diagnosis and treatment for many RTIs do not require high-technology health care. For the hundreds of millions of women with chronic RTIs acquired from their sexual partners, life can become a living hell. Infection is a major cause of infertility, and it leads to scorn and rejection in many countries. These women may experience constant pain, have festering lesions of the genital tract, be at enhanced risk of secondary diseases, and endure social ostracism. The problems associated with RTIs have grown even greater in the past decade with the emergence of human immunodeficiency virus (HIV) and AIDS. Preexisting sexually transmitted disease, particularly when associated with genital tract ulcers, raises women's vulnerability to the transmission of HIV 3-5 fold.

Racial and ethnic disparities in health care are known to reflect access to care and other issues that arise from differing socioeconomic conditions. There is, however, increasing evidence that even after such differences are accounted for, race and ethnicity remain significant predictors of the quality of health care received. In *Unequal Treatment*, a panel of experts documents this evidence and explores how persons of color experience the health care environment. The book examines how disparities in treatment may arise in health care systems and looks at aspects of the clinical encounter that may contribute to such disparities. Patients' and providers' attitudes, expectations, and behavior are analyzed. How to intervene? *Unequal Treatment* offers recommendations for improvements in medical care financing, allocation of care, availability of language translation, community-based care, and other arenas. The committee highlights the potential of cross-cultural education to improve provider-patient communication and offers a detailed look at how to integrate cross-cultural learning within the health professions. The book concludes with recommendations for data collection and research initiatives. *Unequal Treatment* will be vitally important to health care policymakers, administrators, providers, educators, and students as well as advocates for people of color.

The care that a patient receives in the first hours after surgery is crucial to minimizing the risk of complications such as heart attacks, pneumonia, and blood clots. As the patient awakes from their drug-induced coma, they remain unable to care for themselves, and at increased risk of harm. It is an environment where many skills and equipment are brought together, and successful development of recovery room units has significantly reduced the number of deaths from preventable conditions. This is a new edition of an established text that enables those working in the postoperative environment to manage day-to-day problems, but also make difficult decisions. It is a practical guide to setting-up, equipping, staffing, and administering this acute care unit.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the

solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

This complete foundational text and reference covers the core curriculum for radiography students with vivid illustrations and thoroughly updated content. In the 4th edition of this highly-respected text, content is updated and modified to convey the pathology knowledge radiographers need at the appropriate comprehension level for better understanding. The book covers all of the essential information radiography students need, including disease processes, their radiographic appearance, and their treatment. Radiographers Notes in every chapter provide helpful suggestions for producing optimal radiographs for each organ system and teach students to deal effectively with varying patient needs. Thorough coverage of alternative imaging modalities encourages readers to think about other imaging modalities that may be needed to ensure proper diagnosis. Summary of diseases, their locations, their radiographic appearance, and treatment tables provide a review tool for students and a quick reference guide for practitioners. Treatment sections provide useful background on certain treatment and prognosis information for a more thorough understanding of pathology. Organized by body systems, information is easily located and convenient for studying one area at a time in a logical sequence. Written for radiographers, the text provides the most up-to-date, logically organized presentation of radiographic pathology available. Enhanced imaging appearances include multiple modalities such as SPECT, PET, CT, MR, ultrasound, and fusion. Now covers the pathology of hepatitis variations, SARS, anthrax, and Marfan's syndrome for more comprehensive information. An expanded discussion of how CT and MR are used to diagnose pathological processes helps students understand the benefits of using these scans. New and updated radiograph images of the newly added pathologies. More images for alternative modalities, including nuclear, ultrasound, PET, CT, and vascular imaging.
